Data

For this analysis you will use the loans data available from here:

https://spark-public.s3.amazonaws.com/dataanalysis/loansData.csv (https://spark-public.s3.amazonaws.com/dataanalysis/loansData.csv)
https://spark-public.s3.amazonaws.com/dataanalysis/loansData.rda (https://spark-public.s3.amazonaws.com/dataanalysis/loansData.rda)

There is a code book for the variables in the data set available here:

https://spark-public.s3.amazonaws.com/dataanalysis/loansCodebook.pdf (https://spark-public.s3.amazonaws.com/dataanalysis/loansCodebook.pdf)

Prompt

The data above consist of a sample of 2,500 peer-to-peer loans issued through the Lending Club (https://www.lendingclub.com/home.action)). The interest rate of these loans is determined by the Lending Club on the basis of characteristics of the person asking for

the loan such as their employment history, credit history, and creditworthiness scores.

The purpose of your analysis is to identify and quantify associations between the interest rate of the loan and the other variables in the data set. In particular, you should consider whether any of these variables have an important association with interest rate after taking into account the applicant's FICO score. For example, if two people have the same FICO score, can the other variables explain a difference in interest rate between them?

What you should submit

Your data analysis submission will consist of the following components:

- 1. The main text of your document including a numbered list of references. This can be uploaded either as a pdf document or typed into the text box (not both!). The limit for the text and references is 2000 words. Your main text should be written in the form of an essay with an introduction, methods, results, and conclusions section.
- 2. One figure for your data analysis uploaded as a .png, .jpg, or .pdf file, along with a figure caption of up to 500 words.

Reproducibility

Due to security concerns with the exchange of R code, you will no longer be asked to submit code to reproduce your analyses. I still believe reproducibility is a key component of data analysis and I encourage you to create reproducible code for your data analysis.

Submission Deadline

You must submit your data analysis by February 18th, 2013 at 7:00AM UTC-5:00 (Baltimore time). No late days may be applied to the data analysis. Note that this is an extension of the original date posted on the class website.

Please either enter the body of your data analysis in the text box or upload a pdf file with your analysis. This file should both contain the main text of your analysis and the numbered list of references. It may be no more than 2000 words.

Does the analysis have an introduction, methods, results, and conclusions section?
▼
Are figures labeled and referred to by number in the text?
▼
Is the analysis written in clear and understandable English?
▼
Are the names of variables reported in plain language, rather than in coded names?
•
Does the analysis report the number of observations/samples?
▼
Does the analysis report any missing data or other unusual features?
▼

	ne analysis include description and jurmations?	Still Cation for data
	•	
Does ti	ne analysis include a discussion of p	otential confounders?
	•	
Are the	statistical models correctly applied?	
	•	
Are est	imates reported with appropriate unit	s and measures of uncertainty?
	•	
Are est	imators/predictions appropriately inte	erpreted?
	•	
Does tl	ne analysis make concrete conclusior	ıs?
	•
